

Doctor Raphaël NOGIER Questions for the exam

On one ear draw:

The following points: eye, locus niger, prostate, kidney etc. ...

The locations of the following corresponding scars: thyroid, hepatitis, prostatitis

The anti-smoking program

Innervation of the ear

Module: The auriculotherapy point

1. Describe the different types of points observed on one ear
2. Describe the different methods of point detection
3. Are the pain points always detectable by electricity and by VAS?

Explain your answer

4. Needle? ASP? Photons? What are the arguments for choosing one treatment over another?
5. Hierarchy of points. Explain how to choose the sequence of the points to be treated
6. Should we start an examination with electrical detection or with tender point detection? Explain and justify your answer
7. Describe the different types of electrical detection. Argue about the pros and cons
8. Treatment of points by frequencies. How to choose the frequencies used.

What type of device to use? Laser? Infra-red?

9. Undesirable side effects of regular needles and ASP needles
10. Cauterization: indications, side effects, technique.

Various questions

1. What is aphasia? List the different types of aphasia.
2. Name the embryological origin (meso, ecto, endo) of:

Thyroid

Prostate

Uterus

Ovaries

Testicles

Arteries

Thymus

Adrenal cortex

Adrenal medulla

Eye

Mammary gland

Intestine

Veins

Spleen

3. What are the clinical and biological signs as well as the treatment for Hashimoto's thyroiditis?
4. Briefly describe the cells of the innate and adaptive immune system
5. How does Mast Cell Degranulation happen?
6. What are hyperglycemic hormones and hypoglycemic hormones?
7. Classic Multiple Sclerosis (MS): describe the clinical signs, diagnosis, and treatment

8. Parkinson's Disease: describe the diagnosis, ear treatment
9. Eczema: etiology, diagnosis, conventional treatment, ear treatment.
10. Describe the course of action to take in the event of a nervous breakdown.
11. Who was René Leriche?
12. Who discovered the electrical detection of acupuncture points?
13. What are the historical differences between auriculotherapy and ear acupuncture?
14. Biography of Paul Nogier (10 lines)

Basic auriculotherapy

1. Stomach point: description, detection, treatment, indication
2. Point 0: description, detection, treatment, indication
3. Treatment of shoulder pain by auriculotherapy
4. Treatment of emotional trauma by auriculotherapy
5. Differences between symmetry and laterality
6. The hypothalamus in auriculotherapy: description, indications, treatments
7. Anti-smoking programs: modalities, points, protocols.
8. Asthma: brief description of the physiopathology, drug treatment and auriculotherapy treatment
9. Tinnitus: clinical description, pathophysiology, auriculotherapy treatment
10. Chronic inflammatory diseases and auriculotherapy
11. Clinical signs of compression of the stellar ganglion
12. Physical signs of compression of the stellar ganglion
13. Location and indications of the marvelous point

14. Frequency A: indications
15. Frequency B: indications
16. Frequency C: indications
17. Frequency D: indications
18. Frequency E: indications
19. Frequency F: indications
20. Frequency G: indications
21. Frequency L: indications

Module: Auriculotherapy, diet and the use of VAS

1. Classification of hostile reactions to food
2. Clinical signs, diagnosis and treatment of IgE-dependent food allergies/ sensitivity
3. Clinical signs, diagnosis and treatment of delayed food allergies/ sensitivity
4. Describe the preparation of a food test ring
5. Chemical composition of gluten
6. What is a protein?
7. VAS and food allergy
8. Describe the protocol for the evaluation of a food allergy / sensitivity in auriculotherapy
9. Reintroduction of a food after an elimination diet: when, how, why?
10. What are the essential amino acids
